

One agentic operating system. Five industries. One founder.

For 18 months I've been building quietly. No co-founder. No external team. No VC backing. Just a clear thesis: high-stakes industries operate on incomplete information and delayed decisions. The cost is measured in contracts lost, vessels flagged, properties missed, threats undetected.

Alloy is the execution fabric that changes this.

Every signal — from maritime AIS feeds, legal dockets, property filings, security alerts, or executive dashboards — enters Alloy's 9-step pipeline. Signal to auditable action. Every step governed. Every decision explainable. Every output attributed.

INDUSTRIES

The Alloy Pipeline — 9 Steps, Zero Black Boxes

01 Ingest

Signal enters from pack or connector

02 Normalize

Schema reconciled, entity resolved

03 Evaluate

Severity, blast radius, SLA proximity

04 Recommend

Priority scored, action proposed

05 Route

Right person, right context, right channel

06 Gate

Human approval for consequential actions

07 Execute

Action confirmed with authorization logged

08 Verify

Outcome tracked, exceptions escalated

09 Audit

Immutable record — attributable, complete

"Signal to confirmed action. No black boxes. No unexplained automation. Every output is source-traced and human-governed where it matters."

Governance & The LinkedIn Post

Workflow Orchestration & Governance Audit

The Alloy Trust Model

Every agent action produces a Decision Object — a structured record containing the verdict, the evidence chain, the confidence score, the approval chain, and the immutable audit hash. No black boxes. No unexplained automation. Every output is source-traced and operator/attorney-governed.

LinkedIn Post — Copy & Paste Ready

I've spent 18 months building what I believe is the first agentic operating system purpose-built for high-stakes industries. One architecture. Five verticals. One founder. Here's what I built:

! Alloy — the 9-step execution fabric: Ingest ! Normalize ! Evaluate ! Recommend ! Route ! Gate ! Execute ! Verify ! Audit. Every agent action is governed, explainable, and human-approved where it matters.

! Lyte — Business observability. Surfaces what's stuck, at risk, or about to break before damage compounds. 5 urgent. 8 gaps. \$5.03M at risk surfaced in real time.

! Aegis — Unified defense & intelligence command. Three workspaces (Defense, Command, Labs) sharing one data context. 7 active incidents. CVSS 9.1 detected.

! Vessels — Maritime intelligence. 1,247 vessels tracked. Dark vessel detection. Sanctions screening. Voyage economics to the TCE.

! Terra — Real estate intelligence. \$319.6M pipeline tracked. Pre-foreclosure signals. Distress detection. Ownership graph analysis.

! PRISM Counsel — Litigation intelligence for plaintiff-side firms. AI outputs are source-traced and attorney-governed. Every verdict is auditable.

! Carlota Jo — Private advisory OS for UHNW clients. Preference genome. Anticipation engine. Discretion by design.

The technical depth: 161 database tables · 518+ API endpoints · Skill Registry · Connector Mesh · Decision Objects · Operator Control Center.

This is not a demo. These are live, running systems.

#AgenticAI #AIInfrastructure #BuildingInPublic #SZLHoldings #Alloy #StartupFounder #AIGovernance #EnterpriseAI

A dark blue banner for PRISM Counsel. At the top, navigation links include 'CAPABILITIES', 'PRACTICE MODULES', 'USE CASES', 'PROOF', 'PRICING', and a yellow 'Request Demo' button. Below the navigation, the text 'LITIGATION INTELLIGENCE' is written in small, spaced-out letters. The main heading 'Litigation intelligence' is in large white font, with 'built for' in smaller gold font below it. A paragraph of text describes the product: 'PRISM Counsel gives plaintiff-side litigation teams a single source of truth with, settlement intelligence, insurer behavior, and portfolio analytics — with every AI output source-tracked and attorney-reviewed.' The PRISM Counsel logo is in the bottom left.

SZL Stephen Lutar SIGNAL TERRY

ALL SYSTEMS LIVE

Stephen Lutar

Founder & CEO, SZL Holdings. I build command systems that close the loop from signal to decision to auditable action — across five industries, one architecture.

Applications in Action

Interior command surfaces showing Alloy-powered AI at work across industries.

Terra — Deal Pipeline (\$319.6M) & Market Dashboard

Lyte — Executive Command Center (5 Urgent, \$5.03M at Risk)

Carlota Jo — Private Advisory OS

Mobile Apps & Technical Depth

Native mobile experiences for each vertical built with Expo React Native.

Aegis Mobile · Lyte Mobile · SZL Holdings Mobile

Technical Architecture — One Founder, One Codebase

- 161 database tables across 5 industries
- 518+ REST/GraphQL API endpoints
- 8 web applications (React + Vite + TypeScript)
- 7 mobile apps (Expo React Native)
- Skill Registry: versioned, approved, audited agent capabilities
- Connector Mesh: real-time integration health monitoring
- Decision Objects: structured AI outputs with confidence scores
- Operator Control: live agent health & policy enforcement

Ready to see Alloy in production?

I'm currently in the design-partner stage. If you're a maritime operator, legal firm, institutional real estate investor, security operations team, or executive who wants to understand what's actually happening inside their business — I'd like to talk.

I built this alone. Every table, every endpoint, every pipeline stage, every governed decision surface.
