

Operator Demo Brief

Audience: VP Operations, Chief of Staff, IT Directors, senior operators · **Format:** 15-minute operator demo · **Goal:** show signal triage, governed execution, and audit evidence in a working operator surface

"Every step is visible, every decision has evidence, and every action generates a permanent receipt."

DEMO FLOW

- 1. Signal Triage** — [/operations/prism/signals](#) A critical signal — *"Fleet ETA compliance gap, 3 vessels outside SLA"* — is detected, classified, and surfaced automatically. Cross-domain context attached: Aegis piracy advisory (Bay of Bengal, Level 3), Terra port congestion at Singapore, PRISM SLA penalty clause.
- 2. Governed Decision Loop** — [/command/strategy](#)
- Signal SIG-4821 (Vessels, Critical) — M/V Meridian, Catalyst, Horizon.
 - Context — 4 enrichment sources, 14 prior cases, 87% pattern confidence.
 - Recommendation REC-0421 — reroute via Strait of Malacca, 82% confidence, 4 reasoning items.
 - Simulation — 10,000 Monte Carlo iterations: reroute median saving \$1.82M (84% confidence) vs. maintain route loss \$850K.
 - Policy Gate — 4 Covenant Policies pass automatically (severity, finance, audit, domain).
 - Approval — Fleet Ops Lead -> Finance Controller -> CEO. 33 minutes from signal to sign-off; identical evidence at every stop.
 - Execution — Reroute dispatched automatically; live execution log streams every step.
 - Proof Chain — PF-9041, PF-9042 — model, confidence, reviewer, note. Immutable.
 - Outcome — SLA breach avoided, \$2.1M protected, accuracy fed back to the model.
- 3. Audit & Proof Trail** — [/operations/trust-audit](#), [/operations/approvals](#) Filter to approved records to show the clean audit surface. Every AI-generated output carries review state and an export-safety flag. The compliance team's view, designed for them.
- 4. Executive Intelligence Layer** — [/strategy/executive-briefing](#) Cross-domain synthesis. What the CEO sees at the start of every day — pre-governed recommendations, not raw alerts.

TALKING POINTS THAT LAND

- Signal detection, enrichment, and recommendation happen *before* a human sees anything.
- Cross-domain evidence is what separates this from monitoring; every source is attributed.
- Operators dismiss, snooze, or reject — every action is logged and tunes the model.
- The Covenant Policy engine is configurable per domain, signal, and threshold.

CHEAT SHEET

Surface	Path	Use For
Governed Decision Loop	/command/strategy	Demo centerpiece
Executive Briefing	/strategy/executive-briefing	Synthesis view
Signal Feed	/operations/prism/signals	Live triage
Approvals Center	/operations/approvals	Human-in-the-loop
Proof Chain Audit	/operations/trust-audit	Compliance evidence
Action Queue	/operations/alloy/actions	Execution detail
Policy Engine	/operations/alloy/governance	Covenant rules

Operators know exactly what they're approving and why. Every decision is traceable. Every action is reversible.
