

SZL HOLDINGS

Social Media Playbook

Copy. Paste. Post.

Every post ready to publish — just follow the steps.

Stephen Lutar | Founder & CEO, SZL Holdings
szlholdings.com | @szlholdings

HOW TO USE THIS PLAYBOOK

This playbook has every social media post ready for you to copy and paste. No writing needed. Just follow the steps for each platform.

What is inside:

- Page 3** LINKEDIN — Your Profile Setup (do this first)
- Page 5** LINKEDIN — 5 Posts (publish 1-2 per week)
- Page 13** X / TWITTER — Pin Your Thread (do this first)
- Page 14** X / TWITTER — 14 Tweets (publish 1-2 per day)
- Page 22** YOUR CHANNELS — Quick reference links

Publishing order (recommended):

1. Set up your LinkedIn profile (headline + about section)
2. Post the LinkedIn portfolio announcement
3. Go to X — post the pinned thread
4. Post 1-2 tweets per day from the list
5. Post 1 LinkedIn article per week
6. Copy Medium articles into medium.com (2-3/week)
7. Copy Substack newsletters into your Substack (1/week)

LINKEDIN — PROFILE SETUP

Do this before posting anything. Update your LinkedIn profile with these sections.

YOUR HEADLINE — COPY THIS INTO LINKEDIN "HEADLINE" FIELD:

Founder & CEO, SZL Holdings | Building governed operational intelligence across 5 industries | 16 apps, 446 tables, 1 architecture

YOUR ABOUT SECTION — COPY EVERYTHING BELOW INTO LINKEDIN "ABOUT" FIELD:

I founded SZL Holdings in 2023 to build the operating layer between business intelligence and accountable execution.

The portfolio today: 16 live applications across five industries – maritime, defense, real estate, legal, and advisory – running on one TypeScript architecture. 446 database tables. 1,618+ REST API endpoints. One shared schema. One execution engine. One developer.

What I build:

! ' Lyte – Business observability. Surfaces revenue stalls, approval drift, and ownership gaps before they compound.

! ' Vessels – Maritime intelligence. Fleet command, AIS analytics, voyage management, and compliance monitoring for global operators.

! ' Aegis – Unified defense. SOC command, threat correlation, analyst tradecraft tools, and incident governance in one surface.

! ' Terra – Real estate intelligence. Distress signal detection, deal pipeline, and ownership analysis across NYC's five boroughs.

! ' PRISM Counsel – Legal matter command. Deadline governance, evidence management, and proof chains for litigation teams.

! ' Carlota Jo – Private advisory. Operational command for UHNW household and estate management.

Every platform runs on Alloy – our execution fabric that handles signal normalization, approval routing, and governed automation. Every AI recommendation includes source attribution and confidence scoring. Every action has an audit trail.

No fake traction. No vaporware. The products are built. The architecture is real.

Writing about business observability, domain intelligence, and what it takes to build a real enterprise software company at: szlholdings.substack.com

YOUR EXPERIENCE — COPY INTO "EXPERIENCE" SECTION:

Founder & CEO – SZL Holdings
2023 – Present

Building a portfolio of governed operational intelligence platforms across five industries. Solo-built 16 applications (8 web, 8 mobile) on a single TypeScript monorepo architecture.

Platform portfolio:

- Lyte – Business observability (6 Lenses framework)
- Vessels – Maritime intelligence (AIS, fleet command, compliance)
- Aegis – Unified defense & SOC command
- Terra – Real estate intelligence (NYC distress engine)
- PRISM Counsel – Legal matter command
- Carlota Jo – Private advisory (UHNW operations)

Technical scope: 446 PostgreSQL tables, 1,618+ REST API endpoints, Alloy execution engine, full AI governance with proof chains.

FEATURED SECTION — ADD THESE LINKS:

1. szlholdings.com — Company site
2. szlholdings.substack.com — "Signal Over Noise" newsletter
3. github.com/szl-holdings — Open source
4. medium.com/@stephen_38454 — Technical articles

SKILLS TO ADD:

Enterprise Architecture · TypeScript · React · Node.js · PostgreSQL · AI Governance
· Business Observability · Maritime Technology · LegalTech · Cybersecurity · Real
Estate Technology · Full-Stack Development · Startup Leadership · SaaS

One founder. 16 applications. One architecture.

Over the past year, I built SZL Holdings — a portfolio of enterprise-grade platforms spanning cybersecurity, maritime intelligence, real estate analytics, legal operations, and business observability.

The numbers:

- 446 database tables
- 1,618 API endpoints
- 8 web applications + 8 mobile apps
- One TypeScript monorepo
- One person

Every platform shares the same authentication layer, the same design system, and the same operational backbone. When I improve one, all of them benefit.

This is not a portfolio of prototypes. These are production systems with real data pipelines, real compliance frameworks, and real operational intelligence.

The platforms:

Aegis — Unified defense & intelligence command for SOC teams

Vessels — Maritime domain awareness & fleet intelligence

Terra — Real estate intelligence for investors and brokers

Lyte — Business observability that surfaces problems before they compound

PRISM Counsel — Legal matter observability for litigation teams

Carlota Jo — Bespoke advisory for high-net-worth households

The thesis is simple: when the architecture is right, one person can do what an organization does — because every platform compounds the same foundation.

I am building in public and writing about it at szlholdings.substack.com.

Why I chose a monorepo for 16 applications – and what happened next.

Most founders choose microservices when they hit scale. I went the opposite direction.

SZL Holdings runs 16 applications from a single TypeScript monorepo. Same database. Same auth. Same design system. Same deployment pipeline.

Here is what that decision actually means in practice:

1. Compound velocity

When I add a feature to the shared library, every platform benefits. A single security patch propagates to all 16 apps in one commit.

2. Schema coherence

446 tables in one PostgreSQL instance with Drizzle ORM. Every platform queries the same source of truth. No eventual consistency headaches. No data syncing nightmares.

3. Design consistency

One design system means every platform looks and feels like it belongs to the same family. Users who touch multiple products do not have to relearn the interface.

4. Deployment simplicity

One CI/CD pipeline. One environment configuration. One set of secrets to manage. The operational overhead of 16 apps is barely more than one.

The tradeoff? Memory pressure. Build complexity. Test surface area.

But for a solo founder, the benefits are not even close. The monorepo is the only reason one person can maintain this many production systems simultaneously.

The architectural decision you make at the beginning compounds – in both directions. Choose wisely.

Launching Signal Over Noise – a biweekly intelligence brief for builders.

If you are tired of "10x your productivity with AI" content, this might be for you.

Signal Over Noise covers three areas:

1. Business Observability

The 6 Lenses framework – a structured approach to understanding what is actually happening inside your organization before metrics tell you it is too late.

2. Domain Intelligence

Real analysis from operating 6 intelligence platforms across cybersecurity, maritime, real estate, legal, and business operations. Not theory – field notes.

3. Founder Operating Notes

What it actually looks like to build and maintain 16 production applications as one person. The decisions, the tradeoffs, and the systems that make it possible.

No engagement bait. No listicles. No growth hacks.

Just signal.

The loudest chorus of 2025: "Foundation models will commoditize everything."

And yet: Vessels Maritime Intelligence is not threatened by GPT-5. Aegis is not threatened by Claude. Terra is not threatened by Gemini.

Why? Because domain specificity is the layer that foundation models cannot commoditize.

A foundation model can write a paragraph about MARPOL regulations. It cannot evaluate whether a specific vessel is compliant with Annex VI requirements given its current fuel configuration and trade route.

A foundation model can explain NYC real estate market trends. It cannot cross-reference DOB violations, HPD complaints, tax arrears, and ACRIS transactions to identify a building showing distress signals 6 months before it hits the market.

The value is not in the model. The value is in the domain architecture around the model:

- !' Proprietary data pipelines
- !' Structured decision frameworks
- !' Calibrated trust boundaries
- !' Domain-specific vocabulary and context

This is what we build at SZL Holdings. Not AI wrappers. Domain intelligence platforms.

X / TWITTER — PIN THIS THREAD FIRST

This is your pinned thread. Post each box as a separate tweet in a thread, then pin the first one to your profile.

TWEET 1 OF 5:

I built 16 applications across 5 industries as a solo founder.

Not a pitch deck. Not a prototype. 16 live apps, 446 database tables, 1,618 API endpoints, one TypeScript monorepo.

This is SZL Holdings. A thread.

TWEET 2 OF 5:

Every industry I have worked in has the same broken pattern:

The signal was available. In a system, in a log, in a pattern of behavior. But no one connected it to an action before the damage was done.

Not because people were not paying attention. Because the layer that would catch it did not exist.

SZL builds that layer.

TWEET 3 OF 5:

The SZL platform portfolio:

Lyte – Business observability
Vessels – Maritime intelligence
Aegis – Unified defense
Terra – Real estate intelligence
PRISM Counsel – Legal matter command
Carlota Jo – Private advisory

One architecture. One execution engine. Everything compounds.

TWEET 4 OF 5:

How I build:

No fake traction. No vaporware.
No outside engineers. No delegation of the hard parts.
Evidence-backed AI with human-in-the-loop gates.
Audit trails on every decision path.
One shared schema – 446 tables, one source of truth.

The architecture is the moat.

TWEET 5 OF 5:

If you are an operator running a complex organization and tired of software that understands your data better than your domain –

If you are an investor interested in what happens when one builder compresses an entire enterprise software company into one architecture –

I am easy to find.

Unpopular opinion: The best enterprise software is invisible.

You should not notice it. You should not think about it. You should not attend training sessions to learn it.

It should surface the right information to the right person at the right time and get out of the way.

That is what Lyte does. Not another dashboard you have to check. An intelligence layer that tells you what matters before you have to ask.

TWEET 13

STEP 1 Go to x.com !' Click "Post"

STEP 2 Copy the gray box below, paste, and click "Post"

COPY THIS:

The legal industry spends more on document management than on operational intelligence.

Think about that.

They have invested billions in organizing the artifacts of legal work and almost nothing in understanding the work itself.

PRISM Counsel exists because we think that is backwards.

Deadline intelligence. Evidence proof chains. Matter health scoring.

Legal observability for the firms ready for it.
