16 Production Applications • 375 Database Tables • 1,618+ API Endpoints

Copy-paste ready post text + portfolio screenshots for LinkedIn

LINKEDIN POST — Copy & Paste

I built 16 production applications. By myself.

Not prototypes. Not weekend projects. Production systems — live, monitored, serving real workflows.

Here's what the stack looks like:

- ! 375 database tables
- ! 1,618+ API endpoints
- ! 7 web platforms + 7 mobile apps + 2 shared libraries
- ! Full TypeScript — zero JavaScript
- ! One monorepo. One architecture. One operator.

The platforms:

- %^a Vessels — Maritime fleet intelligence (AIS tracking, 214-vessel monitoring)
- %^a Aegis — Cybersecurity operations (SOC dashboards, threat correlation)
- %^a Lyte — AI/ML operations command center (\$4.17M portfolio tracking)
- %^a Terra — Real estate pipeline intelligence
- %^a PRISM Counsel — Legal matter command (case management, billing)
- %^a Carlota Jo — Luxury advisory & consulting
- %^a SZL Holdings — The holding company tying it all together

Every platform shares the same foundational architecture:

- ! Drizzle ORM + PostgreSQL
- ! React + Vite (web) / Expo (mobile)
- ! Express API layer with 1,618+ typed endpoints
- ! Shared UI component library
- ! Real-time WebSocket infrastructure

I'm not sharing this to impress anyone.

I'm sharing it because I spent two years building these systems while most people were talking about building them.

Signal over narrative. Execution over pitch decks.

If you're an investor, operator, or builder who values shipped product over slide decks — let's talk.

FIRST COMMENT — Post Immediately After

For anyone who wants to see the actual platforms:

Portfolio: stephenlutar.com

GitHub: github.com/szl-holdings (private org — DM for access)

Individual platforms:

! Vessels: szlholdings.com/vessels

! Aegis: szlholdings.com/aegis

! Lyte Command Center: szlholdings.com/lyte

! Terra: szlholdings.com/terra

! PRISM Counsel: szlholdings.com/prism

! Carlota Jo: szlholdings.com/carlota-jo

Happy to walk through the architecture with anyone interested in the technical decisions behind building at this scale as a solo operator.

HASHTAGS

[#buildinpublic](#) [#solofounder](#) [#typescript](#) [#fullstack](#) [#startups](#) [#saas](#) [#entrepreneurship](#) [#techfounder](#) [#shipping](#)

INVESTOR DM RESPONSE SCRIPT

Thanks for reaching out. Happy to share more context.

SZL Holdings is the parent company — I'm the sole technical founder and operator. The thesis is simple: build production-grade command systems across industries where operators still rely on spreadsheets and disconnected tools.

Every platform runs on the same shared architecture (TypeScript monorepo, PostgreSQL, React/Expo), which means each new vertical compounds on the infrastructure investment rather than starting from zero.

I'd be happy to do a technical walkthrough or share the GitHub org. What's the best way to connect — call or async?

RECOMMENDED CAROUSEL IMAGES

Upload these as a LinkedIn carousel (10 image max). Best screenshots from each platform — no cookie banners, clean UI.

Recommended order: Stephen Hero !' Aegis Hero !' Aegis Command !' Vessels Hero !' Lyte Hero !' Lyte Board !' PRISM Counsel !' Terra !' Carlota Jo !' Stephen Case Studies

FOUNDER — CEO — ARCHITECT

Stephen Lutar

I build command systems that close the loop from signal to decision to auditable action — across five distinct industries under one compounding architecture.

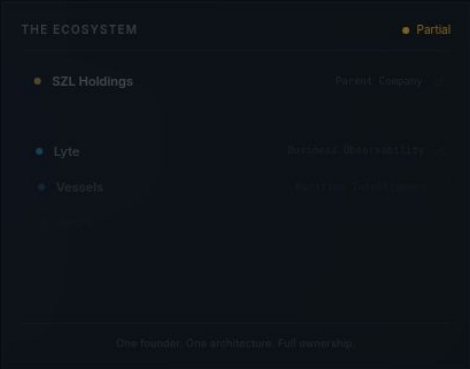

- Cybersecurity
- Maritime
- Real Estate
- AI Orchestration
- Private Advisory

SZL HOLDINGS • UNIFIED DEFENSE & INTELLIGENCE

Three workspaces. One shared intelligence layer.

Aegis unifies security operations, managed services, and AI-driven intelligence into a single console. Defense detects. Command operates. Labs reasons. All three share one data context, one correlation engine, one operating model.
