

Vessels — Maritime Intelligence

Fleet command, voyage economics, and sanctions screening.

Manifest snapshot · 2026-04-19

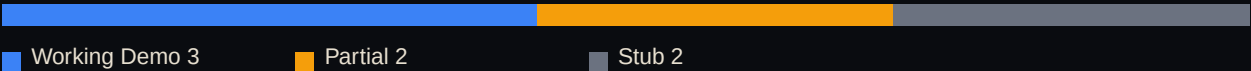

POSITIONING

Vessels turns AIS, voyage, and sanctions data into a fleet command surface. Operators and underwriters work from the same intelligence layer rather than reconciling spreadsheets across vendors.

CAPABILITY SNAPSHOT

TOTAL CAPABILITIES 7	READINESS SCORE 44%	LIVE 0	WORKING DEMO 3	PARTIAL / AT RISK 4
-------------------------	------------------------	-----------	-------------------	------------------------

STATUS MIX

TOP PROOF POINTS

CAP-039 · Fleet dashboard — vessel roster, status, detail views

Fleet roster fetches from /api/vessels; falls back to seed-data.ts when API returns empty. Mapbox map loads when MAPBOX_ACCESS_TOKEN configured.

status: Working Demo · module: artifacts/vessels/src/, artifacts/api-server/src/routes/vessels.ts

CAP-041 · Voyage economics — P&L, revenue at risk, cost breakdown

/api/vessels/voyage-economics endpoint exists; data is seeded. UI renders P&L, margin, fuel/port cost breakdown.

status: Working Demo · module: artifacts/api-server/src/routes/vessels.ts, vessels-extended.ts

CAP-042 · Sanctions screening / OFAC watchlist matching

Integrated with Alloy via /api/vessels/sanctions; structured data renders; no live OFAC API subscription confirmed

status: Working Demo · module: artifacts/api-server/src/routes/vessels.ts (sanctions path), routes/compliance.ts

OPEN RISKS & GAPS

- CAP-040 · AIS live vessel position tracking
Stub · AIS feed stubbed — positions are seeded/simulated. DATA-003 in audit register. Live AIS requires paid provider (\$15–40K/year). AIS_API_KEY not configured.

- **CAP-045 · Chokepoint, Geopolitical Events, Port Congestion intelligence feeds**

Stub · Listed as 'Mock' status in system health panel when external connector not configured; no live data source connected

METHODOLOGY

Every figure in this brief is derived from `artifacts/audit/platform-capability-manifest.json` (manifest version 1.0.0). The readiness score weights live capabilities at 1.0, working demos at 0.75, and partials at 0.4. Capability statuses use SZL's published status definitions: `live`, `working_demo`, `partial`, `stub`, `broken`, `undocumented`. This brief is regenerated whenever the manifest changes — no manually edited claims.
