

One founder. Five industries. One agentic architecture.

Stephen Lutar — Founder & CEO, SZL Holdings
stephenlutar2@gmail.com | x.com/szlholdings | github.com/szl-holdings

This document showcases the SZL Holdings ecosystem: 8 web applications, 7 mobile apps, 375+ database tables, 1,618+ API endpoints, and the Alloy agentic AI execution fabric — all built by a single founder, all sharing one unified architecture.

8 Web Apps	7 Mobile Apps	375+ DB Tables
1,618+ API Endpoints	5 Industries	1 Founder

LINKEDIN POST — CTO/EXECUTIVE TONE

Most AI announcements show a chatbot. Here's what an agentic operating system actually looks like — in production, across five industries, built by one founder.

SZL Holdings runs Alloy, our agentic AI execution fabric. Every consequential action follows the same nine-step pipeline:

INGEST !' TRANSFORM !' ANALYZE !' DECIDE !' APPROVE !' EXECUTE !' VERIFY !' AUDIT !' DELIVER

Every decision object carries a confidence score, evidence chain, and approval trail. Nothing executes without human-in-the-loop governance when the stakes demand it.

One architecture. Five industries:

%, VESSELS — Maritime intelligence. 214 vessels tracked, AIS gap detection, sanctions screening, voyage economics. Fleet operators see positions, compliance risk, and P&L in one surface.

%, TERRA — Real estate intelligence. Distressed property discovery, ownership analysis, pipeline management. Investors and brokers get a single command surface from lead to close.

%, AEGIS — Unified defense & intelligence. Three workspaces (Defense, Command, Labs) share one correlation engine. XDR, managed threat hunting, compliance automation.

%, LYTE — Business observability. Approval queues, ownership gaps, decision latency, stuck workflows. Surfaces what's stuck, at risk, and about to break — before the damage compounds.

%, CARLOTA JO — Private advisory operations. Residence operations, household systems, lifestyle administration. Discretion-first concierge intelligence for high-net-worth families.

%, PRISM COUNSEL — Plaintiff-side litigation intelligence. Matter health, settlement intelligence, insurer behavior, statute clocks. Every AI output is source-traced and attorney-governed.

The technical depth:

- Skill Registry — Every agent capability is a versioned, composable skill. New capabilities deploy without retraining.
- Connector Mesh — Salesforce, Jira, Slack, DocuSign, GitHub — all monitored for health, latency, and error rates.
- Decision Objects — Every consequential agent output carries verdict, evidence, confidence, and approval chain.
- Operator Control Center — Factory floor visibility into every running workflow, queue depth, and capacity.
- AI Eval & Red Teaming — Promptfoo-pattern eval suites, Gray Swan adversarial catalogs, Vectara HHEM hallucination detection.
- Compound AI Pipelines — Fireworks-pattern DAG execution with parallel branching, aggregation, and smart routing.

375+ database tables. 1,618+ API endpoints. 8 web applications. 7 mobile apps.

TECHNICAL ARCHITECTURE — 10-LAYER STACK

LAYER 10 AI Observability Real-time traces, latency heatmaps, SLO compliance
LAYER 9 AI Safety & Grounding Hallucination detection, factual claim verification
LAYER 8 AI Eval & Red Teaming Promptfoo eval suites, Gray Swan adversarial catalog
LAYER 7 Compound AI Pipelines DAG execution, parallel branching, smart routing
LAYER 6 Agent Orchestration Multi-agent delegation, A2A protocol, tool registry
LAYER 5 Knowledge & Memory Entity graph, semantic recall, thread context
LAYER 4 AI Gateway Multi-provider routing, fallback chains, cost optimization
LAYER 3 Alloy Execution Fabric 9-step pipeline, decision objects, governance
LAYER 2 Platform Services Auth, notifications, audit, billing, observability
LAYER 1 Infrastructure PostgreSQL, Express, React, Expo, TypeScript

NVIDIA INCEPTION — INTEGRATED CAPABILITIES

Promptfoo

LLM evaluation framework with 7 assertion types — automated test suites for every agent

Gray Swan AI

Adversarial red teaming with 20-attack catalog across 10 categories — prompt injection to supply chain

Vectara HHEM

Hallucination detection via claim decomposition — grounding score for every factual assertion

Fireworks AI

Compound AI pipeline engine — DAG orchestration with parallel branching and smart routing

Tavily

Real-time web search integration — agents can ground responses in live internet data

Twelve Labs

Video understanding and search — multimodal intelligence for surveillance and media analysis

All capabilities are production-integrated across the SZL platform — not prototypes or demos.

Let's talk.
