

SZL Holdings — Capability Statement

Founder / Principal: Stephen Lutar

Email: stephenlutar2@gmail.com

Headquarters: New York State

Public organization: github.com/szl-holdings

Document date: May 4, 2026 (updated)

Core Competency

SZL Holdings builds **governed operational-intelligence platforms** — software that bridges data ingestion, risk analysis, AI-supported decision-making, execution, and auditability into a single continuous workflow. Every action is logged, every decision is provenance-bound, every gated approval is named. This is what we call a governed command layer.

Differentiators

- **Open-source runtime, in production.** [@szl-holdings/ouroboros](https://github.com/szl-holdings/ouroboros), current release v6.2.0, with full test suite, dependabot, and CodeQL on the repository. No vaporware.
- **DOI-pinned theoretical foundation.** The bounded-loop convergence theorem the runtime implements is published as the Ouroboros Thesis (DOI 10.5281/zenodo.19944926, CC-BY-4.0). The math is written down.
- **Proof-chain by construction.** Every output carries a hash chain back to its inputs and the approver who released it. Audit is not a feature you turn on; it is what the runtime does.
- **Self-correcting publishing record.** The May 2, 2026 thesis re-release publicly retracted and replaced an earlier version after a self-audit identified residual fabrications in announcement materials. Governance discipline is shown in the org's own record.

Capabilities

- AI governance and responsible-automation policy enforcement
- Continuous-monitoring and operational-transparency systems
- Cross-system data reconciliation with auditable lineage
- Cyber-resilience command surfaces
- Domain-specific intelligence platforms (real estate, maritime, legal, advisory)

Verified Platform Numbers (as of 2026-05-03)

Each number below is produced by a documented verification command. Re-runnable.

- 7 customer-facing product surfaces unified by 1 orchestration layer (A11oy)
- 6 platform primitives (Outcome Graph, Proof Chain, Covenant Policy, Decision Simulation, Workflow Engine, Event Fabric)

- 848 provisioned database tables
- 5,524 API endpoint declarations
- 126 monorepo packages
- 44 original innovations in the sovereign engine
- 133 Ouroboros runtime test calls; 29 codex-kernel test calls
- 126 security tests passing
- 23 CI workflows

NAICS Codes

- **541512** Computer Systems Design Services (primary)
- **541511** Custom Computer Programming Services
- **541519** Other Computer Related Services
- **541611** Administrative Management and General Management Consulting Services
- **541690** Other Scientific and Technical Consulting Services

Business Profile

- **Size:** Small business, single-founder
- **UEI / CAGE / DUNS:** To be assigned upon SAM.gov registration
- **Set-aside eligibility:** Under self-cert review (small-business; other set-asides per Empire APEX guidance)

What SZL Holdings Is Not Claiming

In the interest of credibility with procurement counsel: SZL Holdings is not currently performing on a federal contract, has not received a FedRAMP authorization, has not been externally audited, and has no signed platform customers at this writing. The strength of the offering is the public, verifiable proof — the open-source runtime and the DOI-pinned paper — not pretended traction.

Public Proof Artifacts

Asset	Location
Open-source runtime	github.com/szl-holdings/ouroboros (release v6.2.0, May 2, 2026)
Theoretical foundation	github.com/szl-holdings/ouroboros-thesis (paper-v3-2.0.0, May 2, 2026)
Paper DOI	10.5281/zenodo.19944926
Paper license	CC-BY-4.0
Source-of-truth audit	SOURCE_OF_TRUTH.md + audit/source-of-truth.json in the platform repository
