

SZL Holdings -- Live Demo Guide

Empire APEX Meeting | May 6, 2026

Teams Screen Share Walkthrough

Setup (Before the Call)

1. Open the platform in Chrome at your dev URL
 2. Open these tabs in order (you will click through them during the demo):
 - Tab 1: /a11oy/ (A11oy home)
 - Tab 2: /a11oy/intelligence (Decision Intelligence)
 - Tab 3: /a11oy/solutions (Competitive Showcase)
 - Tab 4: /sentra/ (Cyber Resilience)
 - Tab 5: /terra/ (Real Estate Intelligence)
 - Tab 6: /vessels/ (Maritime Intelligence)
 - Tab 7: /counsel/ (Legal Command)
 - Tab 8: /conduit/ (Amaru -- Data Convergence)
 - Tab 9: /carlota-jo/ (Private Advisory)
 - Tab 10: github.com/szl-holdings/ouroboros (runtime repo)
 - Tab 11: github.com/szl-holdings/ouroboros-thesis (thesis repo)
 3. Ensure each tab is fully loaded before the meeting starts
 4. Set Chrome zoom to 100%
 5. Close all other applications and notifications
-

Demo Script (6 minutes total)

Stop 1: A11oy Home (45 seconds)

Tab 1: /a11oy/

What to show: The hero -- "Governed intelligence your unfair advantage"

What to say: "This is A11oy, the orchestration control plane. Everything else runs on top of this. It registers agents, applies policy, gates approvals, and monitors governed workflow runs."

Point out: The navigation structure -- Architecture, Applications, Resources, Platform. This is not a dashboard; it is a decision operating system.

Stop 2: Decision Intelligence (45 seconds)

Tab 2: /a11oy/intelligence

What to show: The Command Overview with KPIs and navigation

What to say: "This is the Decision Intelligence surface, formerly a standalone product called Lyte, now consolidated into A11oy. It aggregates entity intelligence, finance-grade data, and portfolio metrics. Every call routes through the same policy-gated tool bridge -- every result is provable."

Point out: The sidebar navigation with Decision Intelligence group (Command Overview, Entity Deep Dive, ROI Lens, Propeller Drive). This is the full Lyte product line, now unified under one governed surface.

Stop 3: Competitive Showcase (30 seconds)

Tab 3: /a11oy/solutions

What to show: The hero -- "The governed AI execution fabric incumbents cannot build"

What to say: "This positions A11oy against the incumbents in each vertical -- Palantir, Bloomberg, CoStar, Relativity, Windward. The key differentiator is governance by construction, not governance as an add-on."

Note: Skip this if time is tight. Mercy is a procurement counselor, not a buyer. But it shows market awareness.

Stop 4: Sentra (30 seconds)

Tab 4: /sentra/

What to show: The hero -- "Cyber resilience, unified"

What to say: "Sentra is the cybersecurity surface. SOC operations, threat intelligence, compliance, incident response. 80+ modules orchestrated by A11oy. Relevant to CISA and Zero Trust procurement directions."

Stop 5: Terra (30 seconds)

Tab 5: /terra/

What to show: The hero -- "The intelligence surface for serious real estate"

What to say: "Terra is real estate intelligence. Distressed-property discovery, pipeline management, deal execution. Live NYC and NYS data. Relevant to New York State agencies that manage property portfolios."

Stop 6: Vessels (30 seconds)

Tab 6: /vessels/

What to show: The hero with live fleet table -- "Fleet operations. Decided faster."

What to say: "Vessels is the maritime intelligence surface. Fleet positions, voyage economics, sanctions screening. Aligns with DHS and Coast Guard maritime domain awareness."

Point out: The live fleet table at the bottom showing vessel tracking.

Stop 7: Counsel (30 seconds)

Tab 7: /counsel/

What to show: The hero -- "Turn matters, obligations, and legal exposure into command"

What to say: "Counsel is the legal matter command platform. Traceable, governed legal operations for general counsel and legal ops."

Stop 8: Amaru (30 seconds)

Tab 8: /conduit/

What to show: The dashboard with pipeline throughput chart and Sovereign AI Hub nav

What to say: "Amaru is the data convergence engine. Append-only delta log, hash-verified ingest, reconciliation. The data-lineage layer that feeds every other vertical."

Stop 9: Carlota Jo (15 seconds)

Tab 9: /carlota-jo/

What to show: The hero -- "Where life's complexity finds quiet clarity"

What to say: "Carlota Jo is the private advisory brand. Same governed runtime, premium service positioning."

Stop 10: GitHub (45 seconds)

Tab 10: github.com/szl-holdings/ouroboros

What to show: The repository -- releases, tests, CodeQL badge

What to say: "This is the open-source runtime. v6.2.0, with full test suite, dependabot, and CodeQL. Not a marketing repo -- this is the actual code."

Tab 11: github.com/szl-holdings/ouroboros-thesis

What to show: The thesis repository, DOI link

What to say: "And this is the published thesis paper. DOI-pinned on Zenodo. CC-BY-4.0. The convergence proof for the bounded loop the runtime implements."

If She Asks for a Deeper Demo

If Mercy asks to see something specific working:

Decision Intelligence: Navigate to /a11oy/intelligence/deep-dive -- show the Entity Deep Dive page with entity search, financial metrics, ownership graphs.

ROI Lens: Navigate to /a11oy/intelligence/roi-lens -- show the portfolio-wide return analysis across all SZL holdings with waterfall breakdowns.

A11oy Orchestration: Navigate to /a11oy/atlas -- show the Atlas brand orchestration view.

Sentra Dashboard: Click "Open platform" on Sentra landing -- show the cyber resilience dashboard with threat modules.

Terra Pipeline: Click "Enter Platform" on Terra -- show the real estate dashboard with live deal pipeline.

Emergency Fallback

If the live platform is down or screen share fails:

1. Share the screenshots from the dossier/screenshots/ folder

2. Walk through the Capability Statement PDF

3. Open the GitHub repos directly

4. Focus on the verbal script -- the platform demo supports the story but is not the story itself

The story is: governed AI cognition with public proof. The platform demonstrates it. The proof stands on its own.
